Latest practice material - Exam Cram - TestKingIT

**Exam** : **1Y0-401**

**Title** : Designing Citrix XenDesktop  
7.6 Solutions

**Vendor** : Citrix

**Version** : DEMO

**NO.1** In the new environment, the PositivelyFinance application will be deployed as a server OS-hosted application. Which two policy settings should an architect recommend to prevent data leakage from the PositivelyFinance application? (Choose two.)

- A. HDX policy setting with Client drive mapping set to 'Prohibited'
- B. HDX policy setting with Client Clipboard Redirection set too 'Prohibited'
- C. HDX policy setting with File redirection on Client Network drives to 'Prohibited'
- D. Active Directory group policy with the Do not allow clipboard redirection setting set to 'Disabled'
- E. Active Directory group policy with the Prevent access to drives setting set to 'Restrict all drives'

**Answer:** A,B

**NO.2** Why does using a shared VLAN with a Provisioning Services server in both the primary and secondary datacenters help segment streaming traffic?

- A. It separates disk and end-user data traffic.
- B. It enables disk data traffic to be encrypted with IPsec.
- C. It allows the necessary TCP offload settings to be configured on the streaming NIC.
- D. It provides multiple IP addresses that can be dedicated to streaming traffic.

**Answer:** C

**NO.3** Which consideration is unnecessary for the PositivelyPeople application in the new environment?

- A. File security
- B. Secure remote access
- C. Access to legacy mainframe
- D. Support for secured print jobs

**Answer:** C

**NO.4** Why does using SQL Reporting Services help the company comply with its security policy?

- A. Because it is a centralized, industry-standard log that is easily queried
- B. Because it password-protects the audit logs for added security
- C. Because it uses a standard TCP port
- D. Because it collects logs from multiple devices

**Answer:** D

**NO.5** How should the architect segment streaming traffic using Provisioning Services servers on a shared VLAN?

- A. By installing multiple NICs on each datacenter's Provisioning Services server.
- B. By deploying one Provisioning Services server in the primary datacenter and one in the secondary datacenter.
- C. By deploying two Provisioning Services servers in the same datacenter.
- D. By using NetScaler with Global Server Load Balancing (GSLB) to load balance the Provisioning Services servers in each datacenter.

**Answer:** B

**NO.6** What are the benefits of using a Hosted VDI environment with Personal vDisk?

- A. It retains the single image management function while allowing users to install applications
- B. It provides a high level of security while allowing user customization
- C. It has a low storage performance requirement and high user density
- D. It retains the single image management function yet allows application compatibility

**Answer:** A

**NO.7** Scenario:

CGE decided to virtualize its infrastructure workloads and provide a virtual solution to all end users. The infrastructure workloads include Delivery Controllers, StoreFront servers, License Servers, and Microsoft SQL Servers for databases.

What is the benefit of using the Local VM FlexCast model?

- A. It is compatible with tablet devices.
- B. It offers the greatest level of end-user personalization.
- C. It supports a variety of hardware configurations from a single image.
- D. It allows remote access to applications.

**Answer:** D

**NO.8** Which tool should a Citrix Architect use to document CGE's existing printer models?

- A. Print Migrator
- B. Stress Printer
- C. Print Detective
- D. Print Management

**Answer:** C

**NO.9** Scenario:

CGE acquires a small energy company that is running MGMT, a proprietary 16-bit application.

A Citrix Architect is tasked with deploying this application to the Executives/Management end-user group. The CIO mandates that a FlexCast model must be chosen that resembles this end-user group's existing delivery strategy.

It is important that a single-image deployment is utilized and that management effort is kept to a minimum for the update process. The availability of a fast rollback plan must also be available after upgrades, since it can often result in system instability.

Why is deploying MGMT as Hosted VDI with SCCM the best solution?

- A. It allows the installation of custom applications.
- B. It is easy to manage.
- C. It meets the high-performance application demands of the Executives/Management end-user group.
- D. It allows the Executives/Management end-user group to share desktops.

**Answer:** D

**NO.10** Scenario: Legacy GPO policies should NOT be applied to users in the new environment. New GPOs should be configured to ensure maximum performance across all virtual applications and

desktops.

Which two actions should the architect recommend to meet these requirements? (Choose two.)

- A. Enable loopback processing in Merge mode.
- B. Enable loopback processing in Replace mode.
- C. Apply the policy to the OUs containing the user accounts.
- D. Apply the policy to the domain root with a WMI filter excluding the Windows XP OS type.
- E. Apply the policy to the domain root with a deny ACL on the OU containing legacy machines.
- F. Apply the policy to the OUs containing the desktop OS machines' and server OS machines' computer accounts.

**Answer:** B,F

**NO.11** Scenario:

A Citrix Architect identifies a fault in the Active Directory design for CGE's existing XenApp environments. Group Policy Objects (GPOs) from OUs across the Active Directory apply when end users log on to XenApp applications, creating undesirable end-user experiences. The architect determines that CGE needs full control over which GPOs apply in the new environment. How should the architect implement GPOs to ensure full control over which Citrix policies are applied?

- A. Create one GPO for each region.
- B. Create Citrix policies within a GPO and filter the policies based on end users and Delivery Groups.
- C. Create Citrix policies within a GPO and filter the policies based on Client Name.
- D. Create Citrix policies within a GPO and filter the Citrix policies based on IP address.

**Answer:** B

**NO.12** Scenario:

CGE's security administrator mandates that only Gateway services can reside in the DMZ and that all StoreFront traffic must be load balanced. The network administrator requires a resilient solution. How should the architect deploy the six NetScaler appliances in each regional datacenter?

- A. Deploy a NetScaler appliance in each datacenter's internal network for load balancing, and a NetScaler appliance in each datacenter's DMZ for Gateway traffic.
- B. Deploy a NetScaler appliance in each regional datacenter's internal network for Gateway traffic, and another in each datacenter's DMZ for load balancing.
- C. Create three NetScaler virtual servers configured with the subnets of the three sites, and bind them to redirection policies that are configured in ICA Proxy mode using the StoreFront server.
- D. Create six NetScaler virtual servers in high-availability pairs configured with the subnets of the three sites, and bind them to redirection policies that are configured in ICA Proxy mode using the StoreFront server.

**Answer:** B

**NO.13** Scenario:

CGE acquires a small energy company that is running MGMT, a proprietary 16-bit application. A Citrix Architect is tasked with deploying this application to the Executives/Management end-user group. The CIO mandates that a FlexCast model must be chosen that resembles this end-user group's existing delivery strategy.

It is important that a single-image deployment is utilized and that management effort is kept to a minimum for the update process. The availability of a fast rollback plan must also be available after upgrades, since it can often result in system instability.

Why is deploying MGMT in a Remote PC environment on Windows 7 with Machine Creation Services the best solution?

- A. It offers a faster change process.
- B. End users are already comfortable working in a shared environment.
- C. It prevents XenApp server crashes.
- D. It enables faster rollbacks.

**Answer:** C

**NO.14** Scenario: The company is designing a cost-efficient environment for the call center workers. The IT department is replacing the existing thin clients with newer models.

What are the benefits of using Hosted VDI with Provisioning Services?

- A. Highest user density and lowest cost
- B. Highest level of user personalization
- C. Rapid provisioning and highest user density
- D. Lowest cost and highest application compatibility

**Answer:** C

**NO.15** Scenario:

A Citrix Architect is designing a multi-server Provisioning Services solution for CGE. The solution must be highly available and minimize the risk of vDisk inconsistency.

How should the architect configure the local vDisk storage for fault tolerance and high performance?

- A. By implementing RAID 0
- B. By implementing RAID 1
- C. By implementing high-speed local storage with deduplication
- D. By implementing RAID 10

**Answer:** D

**NO.16** Scenario:

CGE decided to disable USB device redirection by default for all end users in the new environment using Citrix policies. The only exception is if there is a clear requirement for end users to have this functionality.

For which two end-user groups should a Citrix Architect configure an exception policy to enable USB device redirection? (Choose two.)

- A. Research
- B. Engineers
- C. Back Office
- D. Technicians

**Answer:** B, D

**NO.17** Why does using Citrix Director help the company comply with its security policy?

- A. Because it provides a centralized data repository

- B. Because it provides controlled access to monitoring functions
- C. Because it uses a standard TCP port
- D. Because it collects data from NetScaler

**Answer:** D

**NO.18** Why should two of each component be located at the London datacenter?

- A. Because it allows for Inter and Intra site high availability
- B. Because it increases security for remote access
- C. Because two components at each datacenter allow for increased user performance
- D. Because user experience will NOT be affected in the event of a site outage

**Answer:** A

**NO.19** Why would having one farm with three configured sites, with one Provisioning Services server in each datacenter, meet the requirements of a regional, single-image management strategy with minimal WAN traffic across datacenters?

- A. It ensures that Provisioning Services targets will NOT load balance between hosts and ensures high availability within each region.
- B. It ensures that Provisioning Services targets will NOT load balance across regions, and reduces management overhead.
- C. It ensures that Provisioning Services targets will NOT load balance between hosts and ensures high availability between regions.
- D. It ensures that Provisioning Services targets will NOT load balance across regions, guarantees high availability within each region, and reduces management overhead.

**Answer:** A

**NO.20** Scenario:

CGE needs to define its management process for desktop image releases. Some groups need a process for version control that includes thorough testing prior to production.

Why does using Hypervisor templates and leveraging Workflow Studio to deploy desktops from templates help manage the image versioning process?

- A. It allows for automatic, scripted upgrades of the deployment template.
- B. It provides centralized, automated, single-image management.
- C. It facilitates consistent deployment of base images.
- D. It allows for scripts to be executed from the same network share as the deployment template.

**Answer:** B
